Prior Lake-Spring Lake Watershed District and the City of Prior Lake would like to hear your feedback on an upcoming water quality improvement project at Indian Ridge Park. This project is anticipated to begin this spring/summer and be finished up this fall.

Partially funded by a grant from the Clean Water Fund through the Board of Soil & Water Resources, the Indian Ridge Park project is part of the larger Lower Prior Lake Retrofits Program. The project will filter out sediments and nutrients from the stormwater that runs off properties and streets in the Indian Ridge Park neighborhood before it reaches the Lower Prior Lake. The map on the reverse side provides more information about the biofiltration feature that will be installed and how it will help us to achieve our goals.

Indian Ridge Circle SE

Biofiltration Area

In this location of the park, re-grading will occur to create a low-lying area with gentle slopes. When it rains, this area will receive stormwater from the surrounding neighborhood and fill up for short periods of time - usually one to two days at a maximum depth of 1.5 feet. This will allow time for pollutants to be filtered out before stormwater makes its way to Prior Lake.

This feature is anticipated to be planted with no-mow grass to allow for passive use of this area. Some shrubs & plants may also be installed.

0 50 100 Feet
